WaterFrog

Benefits

How it Works

Bypass Valve
for flushing the WF
emitter screen and
maintenance

Semi-self cleaning
WF Emitter Screen

WaterFrog Emitter Cap
with hole for controlled
slow leak. Cap screws off
for easy rinse cleaning.

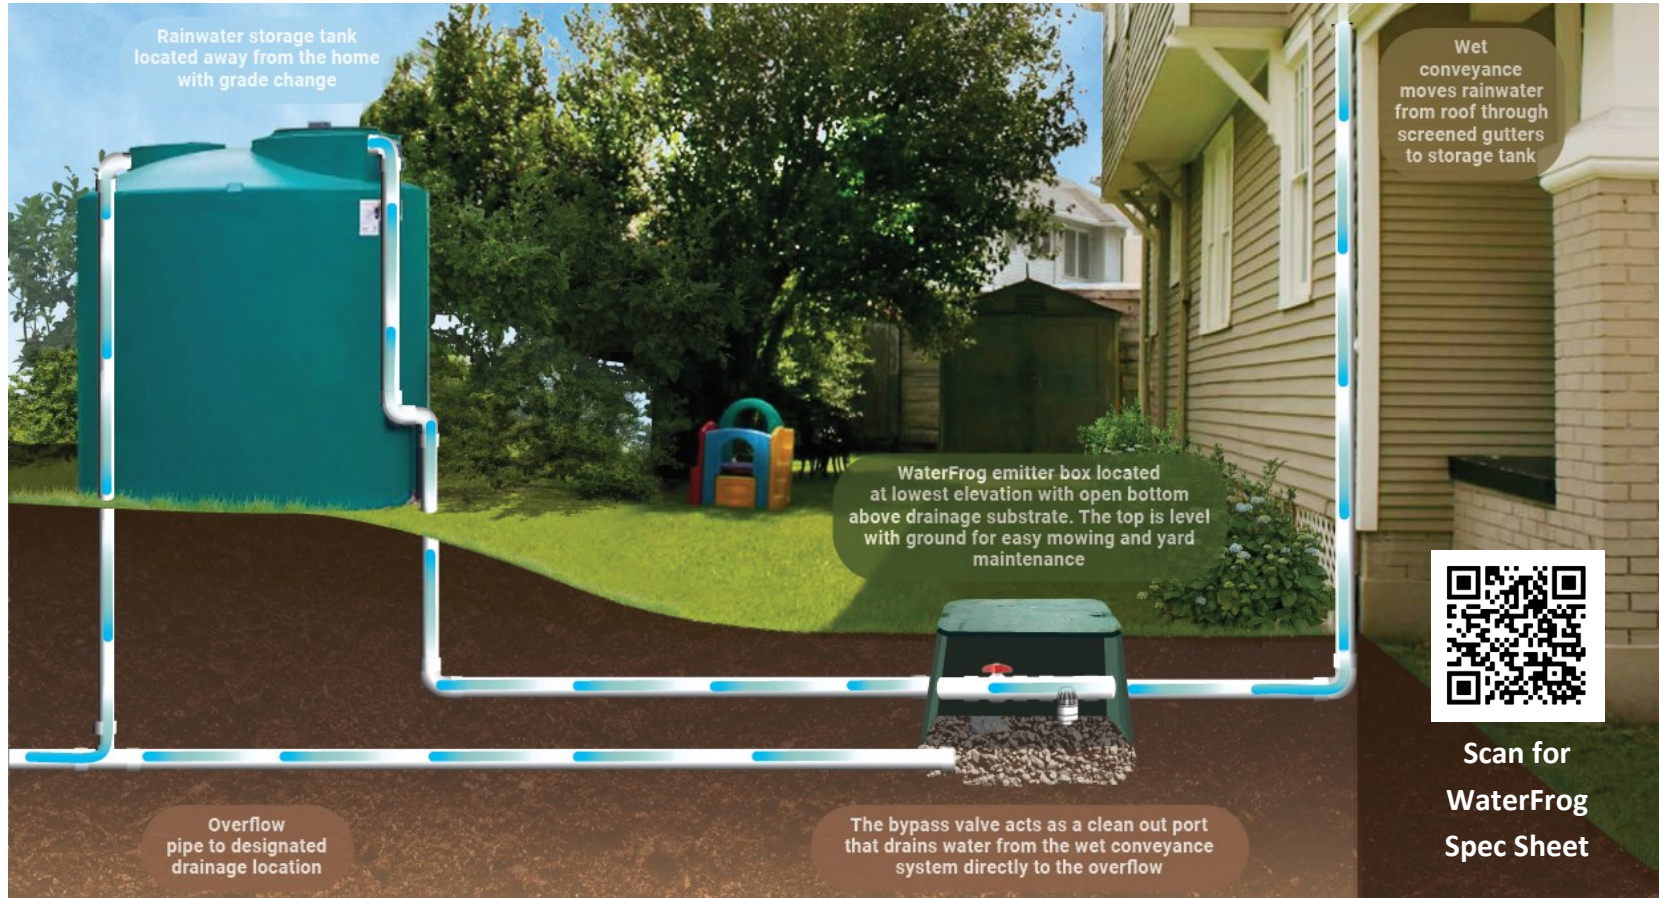

WaterFrog (WF)

Patent 10,619,331

With our patented WaterFrog, your wet conveyance system will transport your rainwater wherever you need it, even uphill!

- ⇒ Choose to direct your rainwater to a storage tank, raingarden or storm drain
- ⇒ Utilize building lots with limited space
- ⇒ Eliminate risk of freezing pipes
- ⇒ Easy operation and maintenance

- Our innovative design controls stormwater during heavy rainfall and stores the water for future use.
- Hydrostatic pressure pulls water from the roof to the storage tanks during rainfall.
- The emitter slowly drains water from the sealed piping system before freezing temperatures.
